A look back at
Water Year 2021

Colorado Precipitation October–September

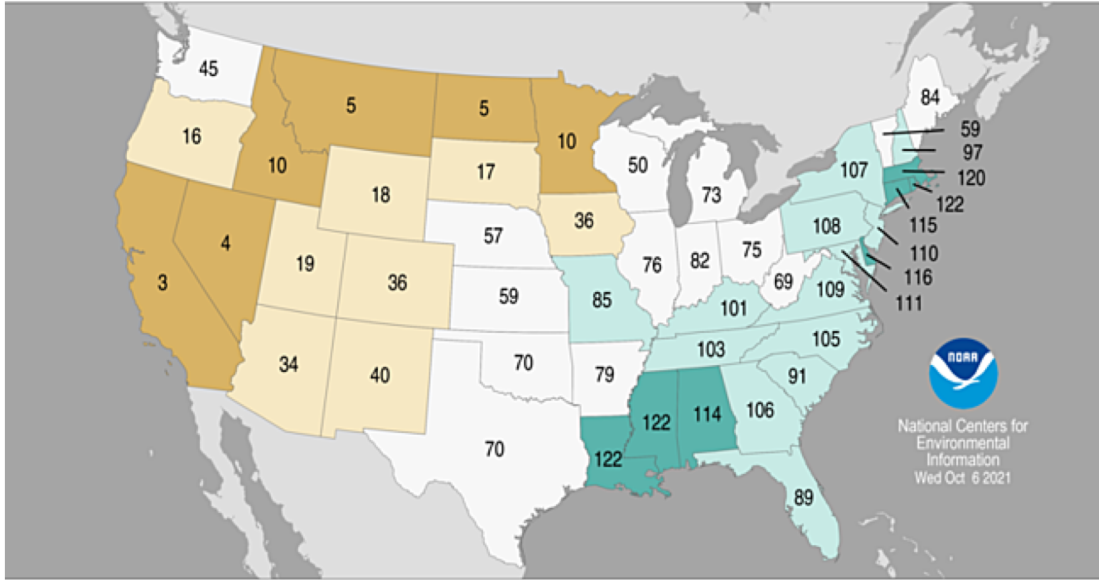

Water Year 2021 ranked as the 36th driest on record for Colorado. Precipitation 16.21", which is 1.89" below the long-term average.

Statewide Precipitation Ranks

October 2020 – September 2021
Period: 1895–2021

U.S. Drought Monitor

November 2, 2021
 (Released Thursday, Nov. 4, 2021)
 Valid 8 a.m. EDT

Drought Impact Types:

- ~ Delineates dominant impacts
- S = Short-Term, typically less than 6 months (e.g. agriculture, grasslands)
- L = Long-Term, typically greater than 6 months (e.g. hydrology, ecology)

Intensity:

- None
- D0 Abnormally Dry
- D1 Moderate Drought
- D2 Severe Drought
- D3 Extreme Drought
- D4 Exceptional Drought

Author:
 Adam Hartman
 NOAA/NWS/NCEP/CPC

The Drought Monitor focuses on broad-scale conditions. Local conditions may vary. For more information on the Drought Monitor, go to <https://droughtmonitor.unl.edu/About.aspx>

The last time we had 0% D4
drought in Colorado was
August 18, 2020.

The duration of D4 drought lasted over a year for Moffat County!
 How does that compare to other counties in the state?

Rank	FIPS	StartDate	EndDate	ConsecutiveWeeks	State	County
1	8011	7/5/12	8/7/14	108	CO	Bent County
2	8025	7/5/12	8/7/14	108	CO	Crowley County
3	8061	7/5/12	8/7/14	108	CO	Kiowa County
4	8089	7/5/12	8/7/14	108	CO	Otero County
5	8071	8/16/12	7/3/14	97	CO	Las Animas County
6	8073	7/5/12	9/12/13	62	CO	Lincoln County
7	8101	7/19/12	9/12/13	60	CO	Pueblo County
8	8081	10/8/20	10/28/21	56	CO	Moffat County
9	8099	7/19/12	8/15/13	56	CO	Prowers County
10	8009	8/9/12	8/15/13	53	CO	Baca County
11	8017	7/26/12	8/1/13	53	CO	Cheyenne County
12	8103	10/8/20	9/30/21	52	CO	Rio Blanco County
13	8107	10/8/20	9/30/21	52	CO	Routt County
14	8041	8/16/12	8/1/13	50	CO	El Paso County

What's the ENSO forecast?

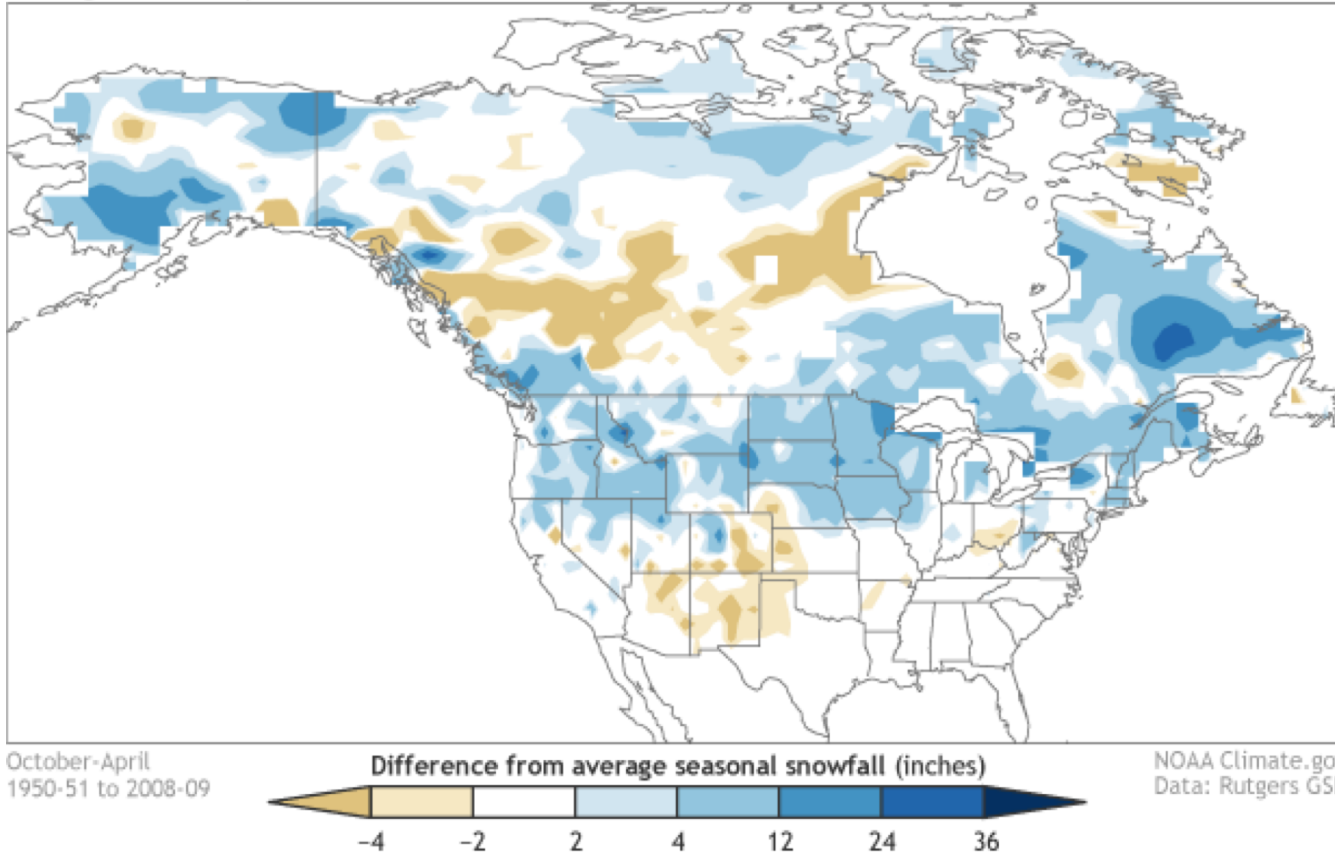

CPC/IRI October 19, 2021: In mid-October, SSTs in the central-eastern equatorial Pacific are -0.8 C different from average. The evolution of key oceanic and atmospheric variables is consistent with La Niña conditions, and therefore, a **La Niña Advisory** has been issued for Oct 2021. A large majority of the models predict SSTs to cool further through boreal autumn and winter, and then **return to ENSO-neutral levels during spring**. Similar to the most-recent official CPC/IRI ENSO Outlook issued on October 14, this objective model-based ENSO outlook also anticipates a **La Niña event with high probability during Oct-Dec and persisting until Jan-Mar**, with a return to ENSO-neutral conditions with high probabilities for rest of the forecast period.

<https://iri.columbia.edu/our-expertise/climate/forecasts/enso/current/>

What does La Niña mean for winter?

Average snowfall patterns for weak La Niña years

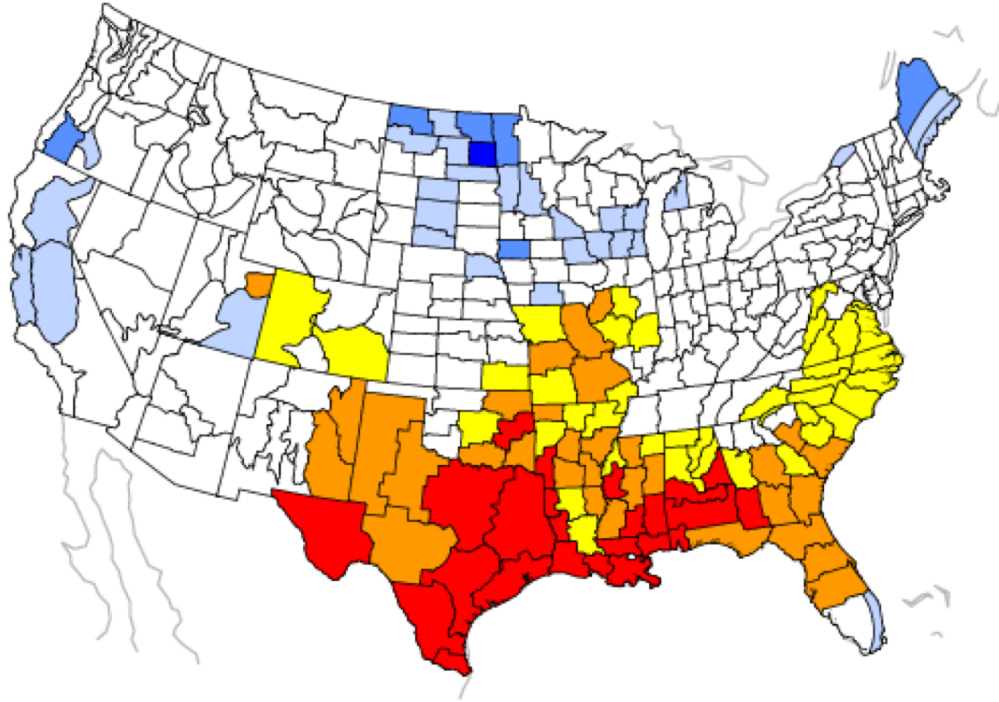

A wetter pattern in the northwest favors more snowfall over our northern mountains.

The drier southwest extends northward and favors less snowfall over the Four Corners and eastern plains.

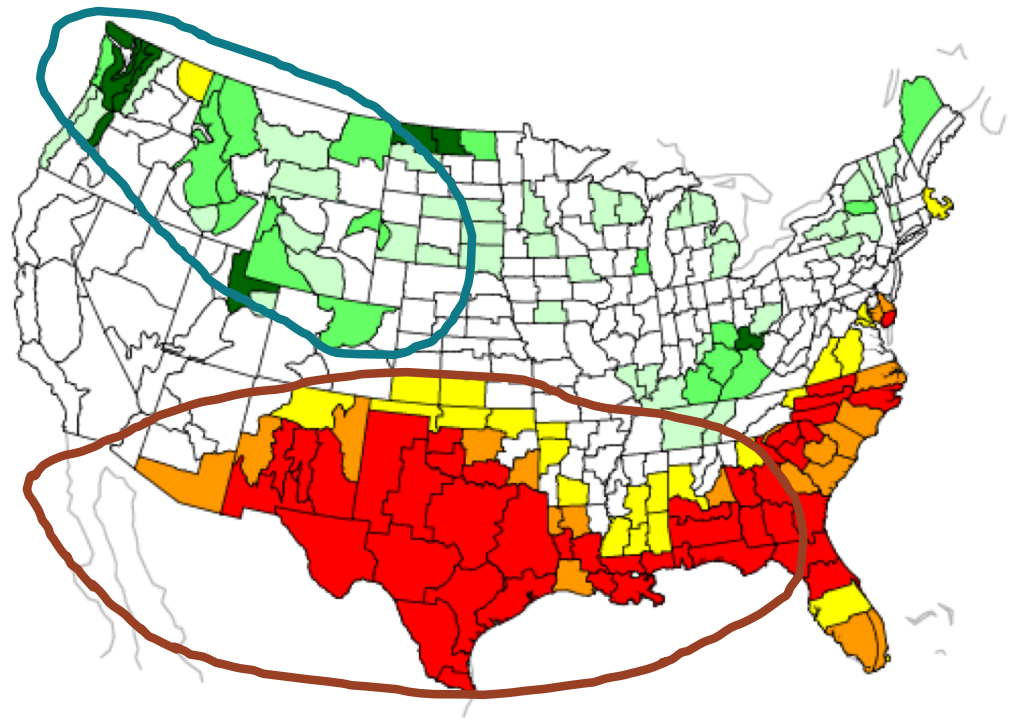

[What about snow during La Niña winters?](#) - ENSO Climate Blog, November 2017
